LOGISTICS CHALLENGES

- CDEMA has alerted partners that they are currently focused on overcoming and logistics challenges to reach affected populations as soon as possible, as well as evacuation and setting up communications on Abaco.
- Access to affected areas is progressively resuming, albeit limited. Needs assessments are being undertaken by UN agencies and humanitarian organizations: on 7 September, two assessment teams accessed several locations across Abaco, the most affected.
- Despite these constraints, relief assistance to respond to the most urgent needs is arriving in Nassau and is dispatched to affected areas, including more than 14,000 individual meals-ready-to-eat from WFP which arrived on 6 September and were immediately delivered to the islands.
