NAWG-Multi Sectoral Anticipatory Impact Analysis of COVID-19
Key Informants Level Assessment Format

The objective of Multi Sectoral Anticipatory Impact Analysis is to provide a rapid overview of the impact on other sectors and the need for assistance. Information collected through this format is the basis for decision making in the initial stages of a lockdown, including the need for more detailed assessments. In the country plan, it is clear that everyone who is affected by Corona virus are dire needs of health support. But other than these due to the current lock down situation, the multi-dimensional impacts prevailed over marginalized people.

Data collection process:
- This format is not a survey, rather it:
  - combination of key informant interviews, field visits, and direct observation:
  - When there is conflicting information, the team or person should fill the format in using their best idea at the time, based on their understanding of scenarios, their own professional experience, secondary data, and lessons learned from similar disasters
  - When accessibility is challenged, but where phone communication is possible, the format can be completed over the phone with the permission of the organization/team coordinating the assessment.

Conduct Survey of-
- 05 health personnel from selected city corporation and municipality (Can be government and Non-Government)
- 05 public representatives or administrative (GoB officials)
- Outlines how the impact is likely to unfold in the days and weeks to follow
- Uses information based on local knowledge and past experiences
