- 16% Other shelter types
- 23% Rented houses
- 57% Host families

**TIMELINE OF DISPLACEMENT AND RETURNS**

The boundaries and names shown and the designations used on this map do not imply official endorsement or acceptance. The data for this infographic has a limited number of sources. The data has not been independently verified and is subject to error or omission, deliberate or otherwise by the various sources. This infographic is strictly intended to inform humanitarian strategic and operational planning and humanitarian response. 1. The target population is based on the Health Cluster target which is the highest of all clusters and is considered as the overall target population for the 2019 HRP. 2. People reached is calculated based on the highest number reached by a cluster achieving highest reach per governorate. 3. Based on 2019 HRP response in the ActivityInfo platform. 4. Unfinished buildings, informal shelters, schools and religious buildings.

5. The absolute number of people reached by protection is lower as one person may benefit from more than one protection activity; same applies with Health, WASH, SNFI.
