

This weekly report is produced by the United Nations (UN) Migration Agency (IOM) as part of the UN Country Management Team (UNCMT) response to the influx of Burundian and Congolese Asylum Seekers from Burundi. The report covers the period from June 12 to June 18, 2017. The next report will be issued on June 26, 2017.

Highlights

- 154 new arrivals (87 males and 67 females) composed of 93 Burundian and 61 Congolese Asylum Seekers. Busiest entry points during this week were Kigadye (65 persons), Bukiriro (34 persons), and Bugarama (24 persons).
- 90 Congolese Asylum Seekers (47 males, 43 females) were relocated from Manyovu transit center to Nyarugusu camp. 3 Burundian Asylum Seekers were relocated from Manyovu transit center to Nduta camp. 20 Asylum Seekers were transported from Mtukula entry point back to Mtendeli camp.
- IOM's fit-to-travel medical screening revealed that, the top five medical conditions among the transported persons during this week were: malaria, skin infections, upper respiratory tract infection, conjunctivitis, and epilepsy.

Main Entry Points

* The cumulative statistics include newly arriving Asylum Seekers as well as those relocated from transit centers to the camps and or reunified with their family members.

Background on IOM Response

Since May 2015, IOM has been providing safe and dignified transportation to persons fleeing the crisis in Burundi and entering Tanzania through various entry points along the border between the two countries mainly in Kasulu, Kibondo, and Ngara districts. IOM teams made of operation and medical staff accompanied each pick up exercise. The objectives are to ensure that transported Asylum Seekers are fit to travel and those with urgent and or special medical needs are referred to health facilities ran by health partners such as Médecins sans Frontières (MSF) and Tanzania Red Cross (TRC) for timely and appropriate medical care. Currently Burundian new arrivals are transported to Nduta camp while Congolese are brought to Nyarugusu camp.

Health

During the reported period, the fit-to-travel medical screenings carried out by the IOM medical team revealed that 25 cases (10 males, 15 females) required medical care. 8 cases required immediate referral to health facilities in the camps. In Lumasi transit center, IOM Medical team referred 4 cases to TRC clinic and they were: 1 case of acute watery diarrhoea, 2 cases of malaria, 1 case of septic wound. In Nyarugusu camp, 1 case of epilepsy was referred to TRC hospital. In Manyovu transit center, IOM Medical team referred 3 cases to IRC clinic and they were: 2 cases of conjunctivitis, 1 case of tinea capitis.

Additionally, there were 8 pregnant women at different gestational age who required ante-natal, intra-natal and post-natal care among the new arrivals.
