## SITUATION UPDATE

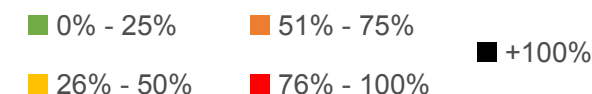

- **2.25M people received bread in 40 sub-districts in NW Syria during December 2020.** FSL partners scaled up bread production & distribution, however **significant gaps were reported in 26 subdistricts where bread need is met by less than half the population** (highlighted in **green** and **yellow** colors).
- **Bread production is not evenly distributed across NW Syria;** some critical areas remain with high number of IDPs (as in Dana, Idleb, Salqin, and Atareb sub-districts) that were partly assisted by local bread production. **Improvements in bread production capacity are reported** in sub-districts in North Aleppo Governorate (Afrin district, Jarablus, Ghandorah) where the majority of population meet the daily minimum requirement.
- **Further assessments are required to figure out the bread distribution linkages amongst sub-districts with surplus and deficit production in NW Syria.**

\*The represented percentages in circles on the map (page 1) refer to the availability of bread by calculating the gap between the actual bread production against the daily bread needs of the population at the sub-district level, which is 330 grams per person per day as minimum daily bread quantity.

\*\*Columns on the map refer to the type of produced bread: subsidized, unsubsidized, and free bread which distributed by NGOs.

\*\*\*The price of un-subsidized bread is considered an unaffordable price.

Traffic lights thresholds ([Click here](#) for traffic lights analysis guide):

<sup>1</sup>WFP Partners distributed 15 kg of flour (equivalent to 100 grams bread per person/day) to 1,335,570 people. The number of WFP beneficiaries is calculated at 30% of WFP beneficiaries in the gaps analysis, as the amount of bread meets 30% minimum daily requirement.

## 2020 Trend Analysis on Bread and Bakery Assistance by FSL Cluster Partners

- February 2021 plans show a number of bread beneficiaries close to the caseload of December 2020. **Sharp reduction in bread production in March and April** are pointed out by FSL partners.
- The daily bread production indicates an increase from April to October 2020 in NW Syria, **at 524MT and 480 MT in Idleb and Aleppo Governorates respectively.**
- Wheat flour distribution to bakeries for bread production** hiked in the last 2020 quarter, reaching out **1.82M beneficiaries** in December,
- versus a reduction of bread distribution in the same period.
- Both **imported and local procured amount of flour remained steady from April to October 2020**, despite the closure of the cross-border point of Bab Al Salam in 2020 for UN assistance.
- Unsubsidized bread prices have risen sharply in 2020, from **188 SYP in January to 858 SYP in October**, which is also reflected by an increase of subsidized price that **went up to 528 SYP over the same reporting period.**
