Key developments in the humanitarian situation

1. Closure of road linking Maiduguri and Damboa by the Nigerian Military has continued to impact on humanitarian response in Damboa. These include; delay in supply of relief items, inflation of price of items as vendors have to travel along route, and challenges in referral of secondary health concerns from Damboa to Maiduguri. Humanitarian partners in Damboa are advocating for the reopening of the road to address these concerns.

2. Despite series of sensitization and efforts by humanitarian partners, community leaders, and some LGA representative, only few of the New Arrivals from Sabon had agreed to be relocated to the new shelters constructed by partners at low-cost extension. The IDPs worried that they might not be returned to their community if they accept to live in a camp setting, thereby preferring to remain in a temporarily constructed shelters at GSS. CCCM/Shelter partners have continued to engage with community leaders and LGA officials to explore other ways of engaging the new arrivals for relocation.

3. There is a huge need for shelter reinforcement across all IDP camps in Damboa. CCCM partners highlighted that there are currently over 1,500 shelters identified across all camps that need to be reinforced.

4. Health partners reported a decrease in the number of suspected measles recorded in August. 13 cases were recorded in the week of the LCG as against 18 cases in the previous week.
