Treatment of Common Diseases

- 204 True Alerts
- 13 False Alerts

Emerging and Response Network (EWARN)

- 44 True Alerts
- 36 False Alerts

Among the alerts, 13 are classified as false alarms, which can be attributed to various factors such as misinterpretation of signals or technical malfunctions. The EWARN system is crucial for early detection and response to potential health emergencies, ensuring that appropriate interventions can be initiated promptly. This proactive approach minimizes the impact of diseases and outbreaks, safeguarding the health of the population.
