

The multiple shocks that affected Haiti in the past years such as natural disasters and epidemics, combined with the country's structural weaknesses in a fragile social, economic and political context, have had a lasting impact on the ability of the most vulnerable to meet their basic needs, and have limited access to quality basic services. The economic situation continued to deteriorate in 2019, with a low growth rate, a depreciation of the local currency, high inflation, an increased price of the food basket, with a negative impact on the humanitarian situation. The security context and social tensions that have prevailed over the past 12 months have also impacted the humanitarian situation and limited humanitarian access in a large part of the country.

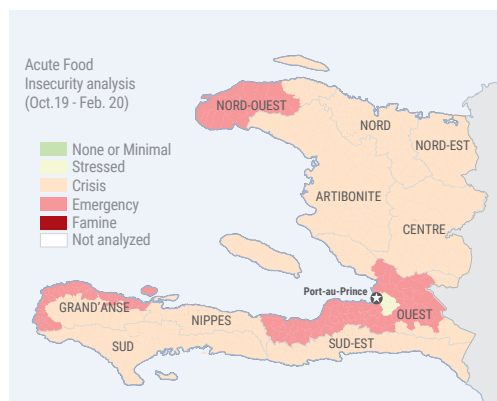

HUMANITARIAN NEEDS OVERVIEW¹

According to the Humanitarian Needs Overview (HNO) projections, in 2020, 4.6 million Haitians, about 40% of the total population, will require urgent humanitarian assistance.

FOOD SECURITY²

ECONOMIC SITUATION³

The Haitian Gourde has lost 17.4% of its value in 2019

The increase in food insecurity is linked to the following causes:

- Low agricultural productivity due to the residual effects of the drought
- Rising commodity prices,
- The depreciation of the gourde,
- Socio-political unrest and deteriorating security conditions.

ACCESS TO BASIC SERVICES⁴

Access to basic services was further reduced in 2019 due to:
- Demonstrations and numerous roadblocks, particularly in February, September and October 2019, which affected the ability of the public and private sector supply chain to provide essential services, causing difficulties in the supply of drinking water, medicine, oxygen and fuel, including to hospitals.
