Created by Mohammad Bawaneh bawanehm@who.int

Date of production: 6 July 2020

Notes:
1. Unless otherwise noted, all data represents the response during May 2020.
2. Differences in health sector response modalities account for variations in data and overall reach. Cross border (XB) works through direct service provision and running of health facilities by XB health partners while programming from within Syria works through both direct service provision and a complementarity approach to support the existing public health system operated by Ministry of Health and Ministry of Higher Education.
